

## How to follow a drawing clue

1. Find the first dot in the part of the drawing grid named by the clue. Put your pencil on that dot.
2. Read the clue from left to right.  $305+6$  means start at dot 305 and make six connections through consecutive numbers, finishing at 311.
3.  $\rightarrow 127$  means draw directly to dot 127. Keep your pencil down. In  $\rightarrow 127+2$ , continue to 128, then 129.
4. When you reach the end of the clue, lift your pencil. Tick that row in the table so you know you've done it, then try the next one.

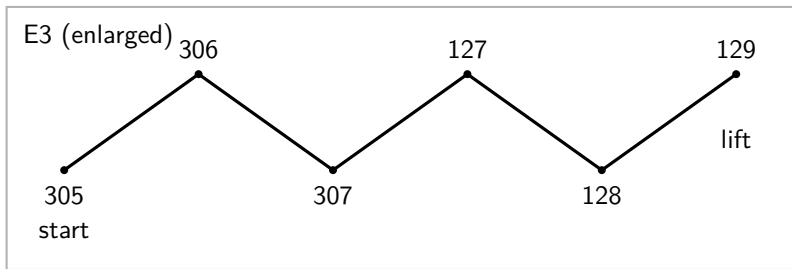

### ★ Example: from one answer to one line

In this sample, you've written 4 in R1C1. Find that row, then read across to the 4 column. Here's just that row, with the other clues left out:

| Cell | 1   | 2   | 3   | 4                            | 5   | 6   | 7   | 8   | 9   |
|------|-----|-----|-----|------------------------------|-----|-----|-----|-----|-----|
| R1C1 | ... | ... | ... | E3/305+2 $\rightarrow$ 127+2 | ... | ... | ... | ... | ... |

In E3, join 305 to 306, then 307. Go straight to 127, then on to 128 and 129.

Lift your pencil at 129.

Some clues bring you back to a dot you've used before. That's fine! There are also extra dots to keep the picture a surprise, so follow your clues rather than joining every dot. If a number sits a little way from its dot, a short gray line shows which dot it belongs to.

### ★ One page, one daily tile

Each drawing has a blank back, so you can take it out of the book without losing another drawing. If you copy the pages, use actual size (100%) and check that the square border measures 6 by 6 inches.

Dot numbers start fresh each day. The map on the next page shows where each finished square goes.

### ★ Need a little help?

If a line looks wrong, check your Sudoku digit and table entry, then erase just that pencil line and try again. The Sudoku answers at the back can help.

# Bring your picture together

Here's where your drawings go! Start at the bottom right on December 1 and follow the dates across the bottom row. Work your way up, changing direction with each row. Christmas Day's square goes at the top left to finish the picture.

TOP OF THE PICTURE

|        |        |        |        |        |
|--------|--------|--------|--------|--------|
| Dec 25 | Dec 24 | Dec 23 | Dec 22 | Dec 21 |
| Dec 16 | Dec 17 | Dec 18 | Dec 19 | Dec 20 |
| Dec 15 | Dec 14 | Dec 13 | Dec 12 | Dec 11 |
| Dec 6  | Dec 7  | Dec 8  | Dec 9  | Dec 10 |
| Dec 5  | Dec 4  | Dec 3  | Dec 2  | Dec 1  |

## ★ Pencil first, then marker

Draw lightly in pencil first so you can fix any slips. Once you're happy with the lines, go over them with a dark marker to make your picture stand out. A fine-tip marker works too, if you prefer. Put scrap paper underneath to catch any ink that soaks through. Let the ink dry, then gently erase your pencil marks.

## ★ Make your display

Ready to put it all together? Use your drawing pages or copies made at actual size. Write each date lightly on the back before cutting along the square border. Lay out the squares using the map above, with the letters A–F at the top of each one.

The printed dots, numbers and grid will stay in your picture. For a display without them, you can trace your finished lines onto plain paper before assembling the squares.

Line up the drawing at the edges, then tape the squares together from the back. You'll need a space 30 by 30 inches for the whole picture. Put it somewhere you can enjoy it—you've made every line!
